A friendly leaflet compiled by the Hellenic Civil Aviation Authority (HCAA) illustrating the basic safety instructions for flying small consumer drones (Unmanned Aircraft Systems-UAS)

Read the manufacturer's instructions, fully charge your batteries and... ...FLY YOUR DRONE SAFELY

Never fly at night or in bad weather

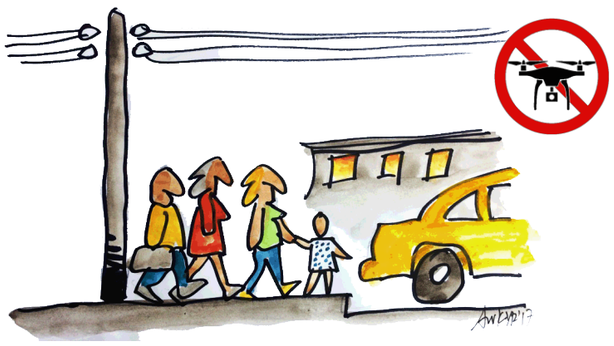

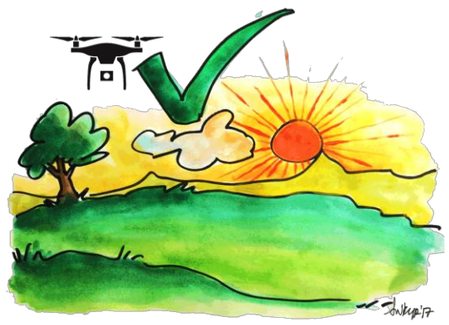

Stay well away from airports, heliports and all other restricted areas* depicted in webpage: dagr.hcaa.gr

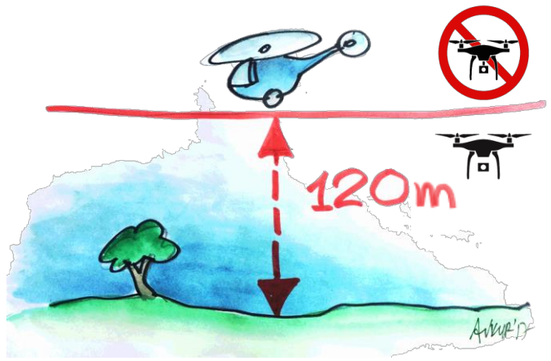

Keep a safe distance and do not fly over people and property including vehicles, powerline cables, antennas etc.

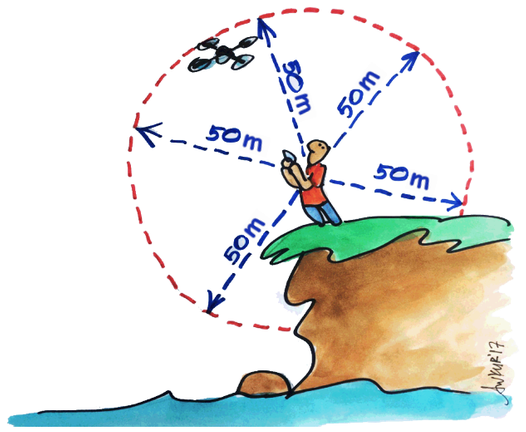

Fly legally and responsibly:

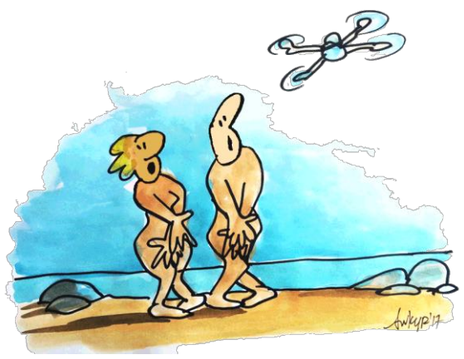

Always keep your drone in sight and never fly higher than 120 meters

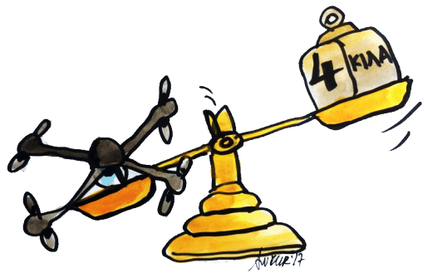

HCAA approval is not required when flying for pleasure in permitted areas* while keeping your drone within 50 meters in any direction

Never fly close to incidents (ie. fires, crashes etc.)

Respect people's privacy: No photos or videos without permission

If your drone is heavier than 4 kilos you need to get a 'Drone-Pilot's Licence' and insurance*

If flying a drone for business, you need to register with HCAA* and obtain more information
