Wreck of the Presidente Viera

Heritage · Charente-Maritime

GPS coordinates	45.84184, -1.25093
Elevation	1 m
Maximum height	120 m max
Access	On foot < 1,000 m
Nearest aerodrome	Aérodrome de Marennes - Le Bournet (LFJI) 14 km E · same altitude as the spot
Spot reference	305017

Rochefort-Saint-Agnant (BA 721) Airport	Airport	21 km E	18 m

Description

At the entrance to the Grande Plage of Saint-Trojan, on the side of La Giraudière and Grand-Village, an imposing wreck that only emerged from the sands in 1987, with the change in the coastline and the retreat of the beach. The imposing steel skeleton is covered with a colony of mussels that people come to pick at low tide. On the night of 18 to 19 November 1916, a storm raged along the coast. An American steamer from Montevideo, weighing 14,000 tons, the Presidente Viera, suffered damage and ran aground on the beach, where it broke in two. The crew of 25 men was rescued. To refloat the ship, German prisoners interned in the citadel of Le Château d'Oléron were called in. And since that November night, the stranded ship has been waiting while, little by little, the waves cover its memory with rust...

Before every flight: check the UAS zones map, NOTAMs and temporary areas, the weather and the Kp index.

Preparing the flight

Pre-flight Check-List

- ☐ Area checked: UAS zones, restrictions, protected areas
- ☐ NOTAMs and temporary areas checked
- ☐ Weather: wind, gusts, rain, visibility; Kp index
- ☐ Operator number displayed on the drone
- ☐ Training certificate or licence with me
- ☐ Third-party liability insurance checked
- ☐ Batteries charged: drone, controller, phone
- ☐ Propellers, motors and frame in good condition
- ☐ Memory card inserted and empty
- ☐ Software up to date, compass and IMU calibrated
- ☐ Return to home: home point and return height set
- ☐ Electronic signalling or remote ID active
- ☐ Take-off area clear, people informed and at a distance
- ☐ Observer present for FPV flights

Key rules of the open category

Recreational flying in France: European open-category rules, applied by the DGAC.

- Maximum height: 120 m above the ground, lower where a restriction requires it.
- Always keep the drone in sight; when flying FPV, an observer keeps it in sight next to you.
- Never fly over crowds and keep the distances of your subcategory (A1, A2 or A3).
- Respect UAS geographical zones: around aerodromes, prohibited or restricted areas, protected areas, sensitive sites.
- Register as an operator if the drone weighs 250 g or more or carries a camera (toys excepted), and display the number on the drone.
- Training: online A1/A3 certificate from 250 g or for a class C1 drone; A2 certificate to fly closer to people with a class C2 drone.
- Always give way to manned aircraft and land if one approaches.
- Respect privacy: no images that identify people without their consent; aerial photography is prohibited in some areas.
- Check your third-party liability insurance.
- In France: registration and training on AlphaTango (DGAC); a drone of 800 g or more must broadcast electronic signalling (or the remote ID of class-marked drones).

Non-exhaustive summary: rules change. Reference: the DGAC open-category guide and the country's regulations.
