Description

Jouy-aux-Arches is crossed by a Gallo-Roman aqueduct built starting in the 2nd century. It was used to supply water to the city of Metz. "Les bouillons de Gorze" is the main source of supply. This spring has been developed into a basin. An underground conduit about 1 meter wide and 12.7 kilometers long links Gorze, at an altitude of 206 meters, to Ars-sur-Moselle, at an altitude of 197 meters. This underground part of the structure can be seen on the departmental road from Gorze to Novéant-sur-Moselle. The 1.2-kilometer-long elevated aqueduct spanned the valley and the Moselle. Over time, the river carried away most of the aqueduct bridge. The structure that overlooks the town has been restored. The sixteen arches that remain rise to a height of 26 meters. The piers measure 5 meters at their base. This elevated section ends in a basin 6 meters in diameter. From Jouy-aux-Arches, the …

Before every flight: check the UAS zones map, NOTAMs and temporary areas, the weather and the Kp index.

Preparing the flight

Pre-flight Check-List

- ☐ Area checked: UAS zones, restrictions, protected areas
- ☐ NOTAMs and temporary areas checked
- ☐ Weather: wind, gusts, rain, visibility; Kp index
- ☐ Operator number displayed on the drone
- ☐ Training certificate or licence with me
- ☐ Third-party liability insurance checked
- ☐ Batteries charged: drone, controller, phone
- ☐ Propellers, motors and frame in good condition
- ☐ Memory card inserted and empty
- ☐ Software up to date, compass and IMU calibrated
- ☐ Return to home: home point and return height set
- ☐ Electronic signalling or remote ID active
- ☐ Take-off area clear, people informed and at a distance
- ☐ Observer present for FPV flights

Key rules of the open category

Recreational flying in France: European open-category rules, applied by the DGAC.

- Maximum height: 120 m above the ground, lower where a restriction requires it.
- Always keep the drone in sight; when flying FPV, an observer keeps it in sight next to you.
- Never fly over crowds and keep the distances of your subcategory (A1, A2 or A3).
- Respect UAS geographical zones: around aerodromes, prohibited or restricted areas, protected areas, sensitive sites.
- Register as an operator if the drone weighs 250 g or more or carries a camera (toys excepted), and display the number on the drone.
- Training: online A1/A3 certificate from 250 g or for a class C1 drone; A2 certificate to fly closer to people with a class C2 drone.
- Always give way to manned aircraft and land if one approaches.
- Respect privacy: no images that identify people without their consent; aerial photography is prohibited in some areas.
- Check your third-party liability insurance.
- In France: registration and training on AlphaTango (DGAC); a drone of 800 g or more must broadcast electronic signalling (or the remote ID of class-marked drones).

Non-exhaustive summary: rules change. Reference: the DGAC open-category guide and the country's regulations.
