Description

The Néville battery, code name Blankenese, is a monument in the Manche department located in the delegated commune of Néville-sur-Mer in Vicq-sur-Mer. It is part of the Atlantic Wall. It was built in 1942 at the Pointe de Néville by the German navy (Kriegsmarine). It was equipped with 4 British Vickers 94 mm anti-aircraft guns. The whole battery includes about thirty bunkers laid out along the beach, linked together by galleries. It was engaged on 6 June 1944 against the Allied landing. It attacked several naval convoys, notably on 7 June, 11 June, 13 June, 15 June and the morning of 18 June, forcing them to turn back. It suffered an air bombardment on 13 June, which did not put it out of action. Its German occupants finally scuttled it on 18 June under the "Henrich plan", which ordered the German defense to be concentrated on the "fortress of Cherbourg" (festung Cherbourg). The …

Before every flight: check the UAS zones map, NOTAMs and temporary areas, the weather and the Kp index.

Preparing the flight

Pre-flight Check-List

- ☐ Area checked: UAS zones, restrictions, protected areas
- ☐ NOTAMs and temporary areas checked
- ☐ Weather: wind, gusts, rain, visibility; Kp index
- ☐ Operator number displayed on the drone
- ☐ Training certificate or licence with me
- ☐ Third-party liability insurance checked
- ☐ Batteries charged: drone, controller, phone
- ☐ Propellers, motors and frame in good condition
- ☐ Memory card inserted and empty
- ☐ Software up to date, compass and IMU calibrated
- ☐ Return to home: home point and return height set
- ☐ Electronic signalling or remote ID active
- ☐ Take-off area clear, people informed and at a distance
- ☐ Observer present for FPV flights

Key rules of the open category

Recreational flying in France: European open-category rules, applied by the DGAC.

- Maximum height: 120 m above the ground, lower where a restriction requires it.
- Always keep the drone in sight; when flying FPV, an observer keeps it in sight next to you.
- Never fly over crowds and keep the distances of your subcategory (A1, A2 or A3).
- Respect UAS geographical zones: around aerodromes, prohibited or restricted areas, protected areas, sensitive sites.
- Register as an operator if the drone weighs 250 g or more or carries a camera (toys excepted), and display the number on the drone.
- Training: online A1/A3 certificate from 250 g or for a class C1 drone; A2 certificate to fly closer to people with a class C2 drone.
- Always give way to manned aircraft and land if one approaches.
- Respect privacy: no images that identify people without their consent; aerial photography is prohibited in some areas.
- Check your third-party liability insurance.
- In France: registration and training on AlphaTango (DGAC); a drone of 800 g or more must broadcast electronic signalling (or the remote ID of class-marked drones).

Non-exhaustive summary: rules change. Reference: the DGAC open-category guide and the country's regulations.
