## Description

The Verdon (Verdoun in Provençal Occitan, Mistralian standard) is a French river that rises at the foot of the Tête de la Sestrière, between the Col d'Allos and the Pic des Trois-Évêchés, and flows into the Durance, near Vinon-sur-Verdon, after running 166.5 kilometers1. Hydronymy The name Verdon (Virdones, Viridionis around 10304), called Vardu by the Gauls, comes from the pre-Celtic term vara, used to denote water5. Geography In its upper course, the Verdon looks like a mountain torrent and has a steep gradient: at Saint-André-les-Alpes, 45 kilometers from its source, the river is already at 900 meters of altitude. Downstream from this point, gradually swelled by its tributaries, the Verdon crosses several mountain ridges through imposing gorges, the Verdon gorges, several of which have been fitted with hydroelectric dams. Sources of the Verdon The Verdon rises in the Southern Alps, in …

Before every flight: check the UAS zones map, NOTAMs and temporary areas, the weather and the Kp index.

# Preparing the flight

## Pre-flight Check-List

- ☐ Area checked: UAS zones, restrictions, protected areas
- ☐ NOTAMs and temporary areas checked
- ☐ Weather: wind, gusts, rain, visibility; Kp index
- ☐ Operator number displayed on the drone
- ☐ Training certificate or licence with me
- ☐ Third-party liability insurance checked
- ☐ Batteries charged: drone, controller, phone
- ☐ Propellers, motors and frame in good condition
- ☐ Memory card inserted and empty
- ☐ Software up to date, compass and IMU calibrated
- ☐ Return to home: home point and return height set
- ☐ Electronic signalling or remote ID active
- ☐ Take-off area clear, people informed and at a distance
- ☐ Observer present for FPV flights

## Key rules of the open category

Recreational flying in France: European open-category rules, applied by the DGAC.

- Maximum height: 120 m above the ground, lower where a restriction requires it.
- Always keep the drone in sight; when flying FPV, an observer keeps it in sight next to you.
- Never fly over crowds and keep the distances of your subcategory (A1, A2 or A3).
- Respect UAS geographical zones: around aerodromes, prohibited or restricted areas, protected areas, sensitive sites.
- Register as an operator if the drone weighs 250 g or more or carries a camera (toys excepted), and display the number on the drone.
- Training: online A1/A3 certificate from 250 g or for a class C1 drone; A2 certificate to fly closer to people with a class C2 drone.
- Always give way to manned aircraft and land if one approaches.
- Respect privacy: no images that identify people without their consent; aerial photography is prohibited in some areas.
- Check your third-party liability insurance.
- In France: registration and training on AlphaTango (DGAC); a drone of 800 g or more must broadcast electronic signalling (or the remote ID of class-marked drones).

*Non-exhaustive summary: rules change. Reference: the DGAC open-category guide and the country's regulations.*
