La cascade du Pissieu

Water · Savoie

GPS coordinates	45.67792, 6.10457
Elevation	673 m
Maximum height	120 m max
Access	On foot > 1,000 m
Nearest aerodrome	La Fullie 5.2 km SE · spot 721 m lower
Spot reference	313264

Description

The Pissieu waterfall forms just downstream of a spring that drains most of the rain and snowmelt from the Margeriaz Plateau. It is a karst resurgence that works on the principle of a so-called "Vaucluse spring". Behind the entrance of the spring, a flooded underground network plunges to a depth of 50 meters and then rises back toward the Margeriaz plateau. 79 km of underground networks are now known beneath the Margeriaz plateau, including the Tanne du Cochon network, which has a vertical drop of 825 meters between its entrance on the plateau and the Pissieu resurgence. Access via the parking area at the bridge over the Nant d'Aillon on the road linking Attilly to Villaret Rouge, from the Châtelard lake, or the parking area at the Base de loisirs des Iles du Chéran. Accessible year-round, the site is particularly spectacular after heavy rain or during the snowmelt. Allow about 2 hours …

Before every flight: check the UAS zones map, NOTAMs and temporary areas, the weather and the Kp index.

Preparing the flight

Pre-flight Check-List

- ☐ Area checked: UAS zones, restrictions, protected areas
- ☐ NOTAMs and temporary areas checked
- ☐ Weather: wind, gusts, rain, visibility; Kp index
- ☐ Operator number displayed on the drone
- ☐ Training certificate or licence with me
- ☐ Third-party liability insurance checked
- ☐ Batteries charged: drone, controller, phone
- ☐ Propellers, motors and frame in good condition
- ☐ Memory card inserted and empty
- ☐ Software up to date, compass and IMU calibrated
- ☐ Return to home: home point and return height set
- ☐ Electronic signalling or remote ID active
- ☐ Take-off area clear, people informed and at a distance
- ☐ Observer present for FPV flights

Key rules of the open category

Recreational flying in France: European open-category rules, applied by the DGAC.

- Maximum height: 120 m above the ground, lower where a restriction requires it.
- Always keep the drone in sight; when flying FPV, an observer keeps it in sight next to you.
- Never fly over crowds and keep the distances of your subcategory (A1, A2 or A3).
- Respect UAS geographical zones: around aerodromes, prohibited or restricted areas, protected areas, sensitive sites.
- Register as an operator if the drone weighs 250 g or more or carries a camera (toys excepted), and display the number on the drone.
- Training: online A1/A3 certificate from 250 g or for a class C1 drone; A2 certificate to fly closer to people with a class C2 drone.
- Always give way to manned aircraft and land if one approaches.
- Respect privacy: no images that identify people without their consent; aerial photography is prohibited in some areas.
- Check your third-party liability insurance.
- In France: registration and training on AlphaTango (DGAC); a drone of 800 g or more must broadcast electronic signalling (or the remote ID of class-marked drones).

Non-exhaustive summary: rules change. Reference: the DGAC open-category guide and the country's regulations.
