Belfort, the Miotte tower

Heritage · Territoire de Belfort

GPS coordinates	47.64839, 6.87376
Elevation	439 m
Maximum height	120 m max
Access	On foot < 1,000 m
Nearest aerodrome	Belfort Chaux Airfield (LFGG) 6.7 km NW · spot 22 m higher
Spot reference	313524

Spot location and restrictions (Drone-Spot map image)

Sun (local times, UTC+01:00)

Montbéliard-Courcelles Airfield	Airport	19 km S	317 m

Description

Tour de la Miotte Fort de la Miotte - 90000 Belfort The Miotte tower is the remains of a former medieval castle, which was incorporated into the Miotte fort in the 19th century. It was probably used as a watchtower. The Miotte tower was destroyed several times over the course of wars, and was notably bombed during the siege of Belfort in 1870-1871 and during the Second World War. The most recent reconstruction dates from 1947. Today the Miotte tower is popular for the panorama it offers. It towers 100 meters above Belfort, and you can enjoy beautiful views of the city and the Vosges Massif. Period: Middle Ages

Before every flight: check the UAS zones map, NOTAMs and temporary areas, the weather and the Kp index.

Preparing the flight

Pre-flight Check-List

- ☐ Area checked: UAS zones, restrictions, protected areas
- ☐ NOTAMs and temporary areas checked
- ☐ Weather: wind, gusts, rain, visibility; Kp index
- ☐ Operator number displayed on the drone
- ☐ Training certificate or licence with me
- ☐ Third-party liability insurance checked
- ☐ Batteries charged: drone, controller, phone
- ☐ Propellers, motors and frame in good condition
- ☐ Memory card inserted and empty
- ☐ Software up to date, compass and IMU calibrated
- ☐ Return to home: home point and return height set
- ☐ Electronic signalling or remote ID active
- ☐ Take-off area clear, people informed and at a distance
- ☐ Observer present for FPV flights

Key rules of the open category

Recreational flying in France: European open-category rules, applied by the DGAC.

- Maximum height: 120 m above the ground, lower where a restriction requires it.
- Always keep the drone in sight; when flying FPV, an observer keeps it in sight next to you.
- Never fly over crowds and keep the distances of your subcategory (A1, A2 or A3).
- Respect UAS geographical zones: around aerodromes, prohibited or restricted areas, protected areas, sensitive sites.
- Register as an operator if the drone weighs 250 g or more or carries a camera (toys excepted), and display the number on the drone.
- Training: online A1/A3 certificate from 250 g or for a class C1 drone; A2 certificate to fly closer to people with a class C2 drone.
- Always give way to manned aircraft and land if one approaches.
- Respect privacy: no images that identify people without their consent; aerial photography is prohibited in some areas.
- Check your third-party liability insurance.
- In France: registration and training on AlphaTango (DGAC); a drone of 800 g or more must broadcast electronic signalling (or the remote ID of class-marked drones).

Non-exhaustive summary: rules change. Reference: the DGAC open-category guide and the country's regulations.
