Pointe de Plouézec

Water · Côtes-d'Armor

GPS coordinates	48.77171, -2.94900
Elevation	0 m
Maximum height	120 m max
Access	On foot < 1,000 m
Nearest aerodrome	Base ULM de Kerfot 7.8 km SW · spot 99 m lower
Spot reference	314413

Description

The Pointe de Plouézec, or Pointe de Bilfot From its highest point, sixty meters above sea level, the Pointe de Plouézec offers you two faces, depending on whether the tide is low or high. Is that why it has two names? Pointe de Plouézec and Pointe de Bilfot are indeed the two names found on maps and postcards. This headland is the result of very ancient volcanic eruptions, with magma from the bowels of the earth that became covered in low vegetation over the millennia. When people settled in the area, it served for several centuries as pasture for their meager livestock. The slow rise of the sea has permanently cut off its last rocks, which have now become true islands. Pointe de Plouezec At low tide, the Pointe de Bilfot reveals the remains of old maritime farms bordering a first rock, the Petit Taurel. Here and around the islets of Mez Goëlo, flat oyster farming concessions were …

Before every flight: check the UAS zones map, NOTAMs and temporary areas, the weather and the Kp index.

Preparing the flight

Pre-flight Check-List

- ☐ Area checked: UAS zones, restrictions, protected areas
- ☐ NOTAMs and temporary areas checked
- ☐ Weather: wind, gusts, rain, visibility; Kp index
- ☐ Operator number displayed on the drone
- ☐ Training certificate or licence with me
- ☐ Third-party liability insurance checked
- ☐ Batteries charged: drone, controller, phone
- ☐ Propellers, motors and frame in good condition
- ☐ Memory card inserted and empty
- ☐ Software up to date, compass and IMU calibrated
- ☐ Return to home: home point and return height set
- ☐ Electronic signalling or remote ID active
- ☐ Take-off area clear, people informed and at a distance
- ☐ Observer present for FPV flights

Key rules of the open category

Recreational flying in France: European open-category rules, applied by the DGAC.

- Maximum height: 120 m above the ground, lower where a restriction requires it.
- Always keep the drone in sight; when flying FPV, an observer keeps it in sight next to you.
- Never fly over crowds and keep the distances of your subcategory (A1, A2 or A3).
- Respect UAS geographical zones: around aerodromes, prohibited or restricted areas, protected areas, sensitive sites.
- Register as an operator if the drone weighs 250 g or more or carries a camera (toys excepted), and display the number on the drone.
- Training: online A1/A3 certificate from 250 g or for a class C1 drone; A2 certificate to fly closer to people with a class C2 drone.
- Always give way to manned aircraft and land if one approaches.
- Respect privacy: no images that identify people without their consent; aerial photography is prohibited in some areas.
- Check your third-party liability insurance.
- In France: registration and training on AlphaTango (DGAC); a drone of 800 g or more must broadcast electronic signalling (or the remote ID of class-marked drones).

Non-exhaustive summary: rules change. Reference: the DGAC open-category guide and the country's regulations.
