Neulliac locks on the Nantes-Brest canal

Water · Morbihan

GPS coordinates	48.17346, -2.99809
Elevation	77 m
Maximum height	120 m max
Access	On foot < 1,000 m
Nearest aerodrome	Pontivy Airport (LFED) 14 km SE · spot 47 m lower
Spot reference	316455

Description

The Nantes-Brest canal was created by linking eight rivers. So that boats could go down the hill, 29 locks were built from Pontivy to Hilvern, 12 of them concentrated at the étangs du Roz. The basins known as "étangs" (ponds) are actually water reserves, buffer zones that keep the water level stable during lock operations. England was threatening France with a naval blockade. To deal with it, Napoleon had to organize traffic along inland waterways. In Brittany, Pontivy is a strategic crossroads: the Blavet opens onto Lorient and could be included in the route of the Nantes-Brest canal. The arsenals of Brest, Nantes and Lorient were to be linked. Canalizing the waterways took 26 years of work on the Blavet, from 1806 to 1832.

Before every flight: check the UAS zones map, NOTAMs and temporary areas, the weather and the Kp index.

Preparing the flight

Pre-flight Check-List

- ☐ Area checked: UAS zones, restrictions, protected areas
- ☐ NOTAMs and temporary areas checked
- ☐ Weather: wind, gusts, rain, visibility; Kp index
- ☐ Operator number displayed on the drone
- ☐ Training certificate or licence with me
- ☐ Third-party liability insurance checked
- ☐ Batteries charged: drone, controller, phone
- ☐ Propellers, motors and frame in good condition
- ☐ Memory card inserted and empty
- ☐ Software up to date, compass and IMU calibrated
- ☐ Return to home: home point and return height set
- ☐ Electronic signalling or remote ID active
- ☐ Take-off area clear, people informed and at a distance
- ☐ Observer present for FPV flights

Key rules of the open category

Recreational flying in France: European open-category rules, applied by the DGAC.

- Maximum height: 120 m above the ground, lower where a restriction requires it.
- Always keep the drone in sight; when flying FPV, an observer keeps it in sight next to you.
- Never fly over crowds and keep the distances of your subcategory (A1, A2 or A3).
- Respect UAS geographical zones: around aerodromes, prohibited or restricted areas, protected areas, sensitive sites.
- Register as an operator if the drone weighs 250 g or more or carries a camera (toys excepted), and display the number on the drone.
- Training: online A1/A3 certificate from 250 g or for a class C1 drone; A2 certificate to fly closer to people with a class C2 drone.
- Always give way to manned aircraft and land if one approaches.
- Respect privacy: no images that identify people without their consent; aerial photography is prohibited in some areas.
- Check your third-party liability insurance.
- In France: registration and training on AlphaTango (DGAC); a drone of 800 g or more must broadcast electronic signalling (or the remote ID of class-marked drones).

Non-exhaustive summary: rules change. Reference: the DGAC open-category guide and the country's regulations.
